

Bristol Instruments' Electronic Waste Disposal Policy

Bristol Instruments is committed to minimizing the economic and environmental impacts of Electronic and Electric Equipment (EEE) waste on both our local community and our international customer base. To facilitate and encourage the responsible disposal of electronic waste, Bristol Instruments accepts the return of Bristol-manufactured wavelength meters, spectrum analyzers, and electronic accessories at the end of their useful life. Returned EEE devices are recycled or disposed of through facilities that conform to the highest standards of Responsible Recycling (R2) Practices, Recycling Industry Operating Standards™ (RIOS™), and National Association for Information Destruction (NAID) standards.
